

CLAIMS

We claim:

1	1. Apparatus for producing printing plates, comprising:
2	a frame,
3	a mounting arranged in said frame;
4	a carrier cylinder having a first end and a second end, said carrier
5	cylinder being cantilever mountable on said mounting via said first end of said carrier cylinder;
6	a motor for driving said carrier cylinder; and
7	an image setting device moveable along said carrier cylinder for setting
8	an image on a blank printing plate arranged on said carrier cylinder, said second end of said
9	carrier cylinder being is freely accessible to permit printing plate change on said carrier
10	cylinder.
1	2. The apparatus according to claim 1, wherein said mounting includes a
2	carrying tube fixed in said frame and a spindle mounted in said carrying tube, said spindle
3	being connected to said carrier cylinder and said motor being arranged in said carrying tube
4	and having a drive connection to said spindle.
1	The apparatus according to claim 1, wherein said motor is fixed in said
2	frame and said carrier includes a journal, and said apparatus further comprises an external
3	flexible drive connecting said motor to said journal of said carrier cylinder.

2

3

4

- The apparatus according to claim 1, wherein said carrier cylinder is 1 4. operatively arranged for receiving a sleeve-like printing plate that can be clamped onto said 2 carrier cylinder, said carrier cylinder having holes arranged in a cover thereof for blowing 3 compressed air against a printing plate inner wall incident printing plate change. 4
- 5. The apparatus according to claim 1, wherein said carrier cylinder 1 includes a clamping device for clamping a finite printing plate onto said carrier cylinder. 2
 - The apparatus according to claim 4, wherein said carrier cylinder is one 6. of plural cylinders of different diameters which are mountable on said mounting.
 - The apparatus according to claim 5, wherein said carrier cylinder is one 7. of plural cylinders of different diameters which are mountable on said mounting.
 - The apparatus according to claim 4, further comprising an intermediate 8. sleeve borne on said carrier cylinder onto which said sleeve-like printing plate can be clamped, said intermediate sleeve being one of plural intermediate sleeves of different external diameter which can be borne on said carrier cylinder.
- The apparatus according to claim 4, wherein said carrier cylinder is 9. 1 operative for selectively receiving sleeve-like printing plates of different diameters. 2

1

2

3

- 10. The apparatus according to claim 1, wherein said carrier cylinder is 1
- operative for receiving one of an offset printing plate, a letterpress printing plate, a 2
- 3 flexographic printing plate, and a gravure printing plate.
- The apparatus of claim 10, wherein a surface of said carrier cylinder 1 11.
- comprises said gravure printing plate. 2
 - The apparatus of claim 1, further comprising a crossmember arranged in 12. said frame parallel to an axis of rotation of said carrier cylinder, said image setting device being moveable on said crossmember.
 - The apparatus of claim 1, further comprising an erasing device 13. arrangement which is settable set against said carrier cylinder.
 - The apparatus of claim 1, further comprising a fixing device 14. arrangement which is settable against said carrier cylinder.
- The apparatus of claim 1, further comprising a layer applicator device 15. 1 2 arrangement which is settable against said carrier cylinder.
